Education

Bachelor of Science, Computational and Data Sciences

December 2024

George Mason University - Fairfax, VA

Associate of Science, Computer Science

June 2021

Northern Virginia Community College - Alexandria, VA

Skills & Certifications

Technologies: Excel, Tableau, Power BI, Microsoft Word, Microsoft PowerPoint

Languages: SQL, Python

Skills: Business and Data Analysis, Requirements Gathering, KPI Definition, Performance Metrics, Data Collection, Dashboard Development, Agile/Scrum, Cross-Functional Collaboration, Written & Verbal Communication, Secure Data Handling, Detail-Oriented

Certification: AWS Certified Cloud Practitioner

Work Experience

Business Analyst

Herndon, VA

Peraton

July 2026 - Present

- Gather and analyze business requirements, translating stakeholder needs into functional, technical, and performance requirements for consular system modernization initiatives.
- Create and maintain user stories, process flows, acceptance criteria, and requirements traceability matrices to support Agile development efforts.
- Collaborate with product owners, developers, QA teams, and system architects to conduct impact analyses, support sprint activities, and facilitate user acceptance testing (UAT).
- Perform data analysis to identify improvement opportunities, support stakeholder presentations, and contribute to data-driven business solutions.

Operations Coordinator

Bladensburg, MD

Advantage Wrecker and Roadside Assistance

March 2025 – June 2026

- Performed trend analysis and operational performance monitoring using transactional and operational data, contributing to an 18% reduction in average response time.
- Translated operational and management requirements into data-driven process improvements, reducing scheduling conflicts and idle time by 10%.
- Developed and maintained Excel-based tracking reports and KPI dashboards for response time, job completion, and downtime metrics, improving fleet utilization by 12%.
- Collaborated with drivers, supervisors, and leadership to support process improvement initiatives and align operational metrics with business objectives.

Dispatcher

Washington D.C.

Abe's Transportation

August 2021 - May 2024

- Built Excel dashboards tracking route utilization, and on-time departure rates, presenting weekly KPI summaries to operations management.
- Analyzed historical dispatch logs and ridership data to identify demand patterns, reducing scheduling conflicts by 15%.
- Coordinated real-time data collection across multiple routes to monitor operational performance and support data-driven staffing decisions.

Projects

Workforce Operations & KPI Analysis — George Mason University ([GitHub](#))

January 2024 – April 2024

Tech: SQL, Excel

- Designed a 4-table relational schema (employees, attendance, overtime, performance reviews) and populated it with 3 months of operational records across 5 departments and 15 employees.
- Authored 20+ SQL queries extracting KPIs including payroll estimates, attendance rate flags, Q1 vs Q2 performance score deltas, and overtime cost by department, surfacing an 18% attendance variance across regions.
- Built a 6-tab Excel dashboard with conditional formatting, pivot tables, and embedded charts, flagging employees below 80% attendance and identifying Logistics as the highest overtime cost department.

Customer Churn & Revenue Risk Analysis — Personal Project ([GitHub](#))

October 2023 – December 2023

Tech: SQL, Excel, Python, Tableau

- Designed a 4-table schema and authored 15+ SQL queries to calculate churn rates by segment, build a composite health score weighted across usage, satisfaction, and tenure, and classify every account as CRITICAL, HIGH, MEDIUM, or LOW risk.
- Trained a logistic regression model in Python using 7 behavioral features extracted from SQL, including usage score drop and billing ticket frequency, achieving clean separation between churned accounts and active accounts.
- Developed a 4-sheet Tableau dashboard with a revenue heatmap, customer health scatter plot sized by MRR, and a usage trend comparison — revealing that churned customers averaged a 6x lower usage score than active customers in the months before churn.
- Built an Excel executive summary with a live what-if scenario model showing that reducing churn from 40% to 25% recovers \$93,410 in annual revenue, giving leadership a quantified business case for customer retention investment.
